

The Human Microbiome

This workshop will provide an introduction to the human microbiome in health and disease states.

The following questions will be addressed:

- What is the human microbiome and what are its functions?
- What types of genomic and metagenomic techniques are employed to study microbiomes?
- What is the composition of the human microbiome at different body sites in states of health?
- How does the human microbiome change in disease states?

Join us for **Elizabeth Grice's** up-close examination of microbes associated with the human body. Dr. Grice is an Assistant Professor of Dermatology at the Perelman School of Medicine.

Date: Tuesday, September 23, 2014

Time: 4:30 – 5:30 PM

Location: Singh Center for Nanotechnology, Room 035
University of Pennsylvania, 3205 Walnut Street, Philadelphia, PA 19104
